

## The Next Generation in Sump Pump Pits

The ECP Sump Basin is the most efficient, safe and innovative sump pit available today! No longer do you have to settle for a glorified trash can in your basement floor. The ECP Sump Pit is molded from high strength, impact resistant polyethylene. This tough, seamless and corrosion proof construction, together with the system's innovative and patented bell design, is now the standard for the future in wet basement drainage.

The first thing that you will notice about the ECP Sump Basin is the unique design. This bell shaped design not only makes every sump pump more efficient, but it also increases the life of your whole basement drainage system. The "bell" shape will keep more than twice the amount of water surrounding the sump pump thus preventing short cycling, effectively increasing the life of your sump pump system. It is sealed, efficient, affordable and guaranteed.

The ECP Sump Pit also reduces the soil moisture content thus reducing your basement humidity levels due to the fact that it performs as a subsurface drainage system. The optional perforated sides allow previously trapped ground water to freely enter the system and alleviate any potential damaging conditions. The engineered design creates a natural well effect, which will eliminate hydrostatic pressure around and under your home creating a dry basement.

### Benefits:

- Efficient Design
- Clear Lid for Inspection
- Built in Sump Pump Platform
- Prevents Sediment from Clogging Sump Pump
- Prevents Short Cycling of Pumps
- 33% More Total Water Capacity

# ECP Sump Basin

The ECP Sump Basin stores 20 gallons of water around the intake of the sump pump opposed to the competitions design that can only store less than 9 gallons. More water volume means less pump cycles. Less pump cycles means longer life for sump pump equipment.

The ECP Sump Basin comes standard with a clear childproof recessed lid that is bolted down to the sump pit. This safety lid provides a clean, flush-mounted finish with neoprene gaskets to properly seal the unit. This water tight seal stops subsurface moisture and mold from reaching your living space thus creating a healthier more energy efficient home environment.

- Unique bell design allows backup sump pump systems to be installed without adversely affecting capacity.
- The ECP Sump Pit can be installed solely for radon mitigation or used as a component in an effective drainage/radon mitigation system.
- Built-in pump platform provides a stable base that protects your sump pump.

### Fights Radon:

- Basement Radon Collection Point
- Sealed Safety Lid
- Removes Radon from Beneath Basement Floors
- Internationally Approved for Radon Mitigation
- Creates a Healthy Living Space
